Abstract

Summary: CellChatAccelRcpp is an accelerated implementation for large-scale CellChat analysis. It preserves the CellChat user workflow while replacing computational bottlenecks with optimized C++ routines.

Availability and implementation: Source code, documentation, test data and reproducibility scripts will be available at <https://github.com/Blake-Deng/CellChatAccelRcpp>. An archived release will be deposited at Zenodo before submission.

Contact: email@example.com

Supplementary information: Supplementary data are available online.

Keywords single-cell RNA-seq, cell-cell communication, CellChat, Rcpp, computational acceleration
